

Year Six – Animal Kingdoms

For the first week and a half of the new school year, the children in Year 6 dived into the deep sea world of the planet's most dangerous predators-sharks! In that time they investigated how the size of our mouths affects our bite radius and experimented with apples to see who would be the deadliest shark in the class! We also investigated how many pupils would make up different species of sharks by lying on the ground in a straight line.
